

Varno v zimo brez alkohola v prometu!

Oglasno sporočilo Javne agencije RS za varnost prometa

V teh prazničnih dneh je uživanje alkohola ob različnih priložnostih še posebej pogosto. Če se po tem spremenite v voznika takega in drugačnega prevoznega sredstva, tvegate nastanek neljubih dogodkov. Alkohol pa ni »kriv« za prometno nesrečo. Odgovoren je človek, ki se alkoholiziran uvede za volan in nesrečo povzroči.

Agencija za varnost prometa opozarja, da so zelo zmotna prepričanja, da obilna hrana lahko posledice pitja alkohola. Zaradi hrane pride le do zakasnitve in se alkoholiziranost pokaže pozneje. Tudi svež zrak in gibanje na prostem ne moreta izničiti učinka popitega alkohola. Izgovori, da so nas drugi prepričali v pitje, da je pot do doma zelo kratka ali da nismo toliko spili, da ne bi mogli voziti, prav tako ne priponorejo k varnosti na cestah.

Zloraba alkohola je do sredine oktobra botrovala 1.104 prometnim nesrečam, 546 telesnim poškodbam (od tega je bilo 84 huje poškodovanih) in 25 smrtnim žrtvam. Večino, 23 smrtnih prometnih nesreč so povzročili

vozniki osebnih vozil in enoslednih motornih vozil. Vsi povzročitelji smrtnih prometnih nesreč so bili moški, izstopajo povzročitelji staro 25–34 in 45–54 let, dve smrtni žrtvi v prometu sta povzročila vinjena mladostnika v starosti 15–17 let. Med vsemi povzročitelji smrtnih prometnih nesreč pod vplivom alkohola je bila povprečna stopnja alkoholiziranosti 1,36 promila. Neslavni „rekorder“ med njimi je imel v krvi 3,14 promila. Izračun na podlagi podatkov iz let 2019 in 2020 kaže, da vsako dvajstvo prometno nesrečo in vsako tretjo prometno nesrečo s smrtnim izidom povzročijo alkoholizirani udeleženci v prometu.

Javna agencija za varnost prometa Republike Slovenije je v sodelovanju s Policijo in nevladnimi organizacijami tudi letos organizirala nacionalno preventivno akcijo in več aktivnosti za preprečevanje vožnje pod vplivom alkohola, drog in drugih psihotaktivnih snovi v prometu. Ob iztekujočem se letu 2021 Agencija za varnost prometa vsem udeležencem v prometu želi varno pot in da bi na vsak cilj prišli srečno.

brez alkohola

Safe driving in winter without alcohol!

An advertisement by the Slovenian Traffic Safety Agency

During this festive time of year consumption of alcohol on various occasions is especially frequent. If you later reach for your car keys, you risk causing unwanted events. However, alcohol is not the “guilty party” in a traffic accident. It is the person who sits behind the wheel intoxicated and causes the accident that is responsible.

The Slovenian Traffic Safety Agency warns that it is wrong to believe that a hearty meal can ease the consequences of alcohol consumption. Food only causes a delay and intoxication is revealed later. Nor can fresh air and movement in the open air nullify the effects of consumed alcohol. Excuses that other people convinced us to drink, that the drive home is very short or that we have not drunk so much that we cannot drive in no way contribute to better safety on our roads.

Up to the middle of October, alcohol abuse had led to 1,104 traffic accidents, 546 bodily injuries (of which 84 were severe), and 25 fatalities. The majority of fatal traffic accidents (23) were caused by drivers of cars and single-track motor vehicles. All persons responsible for fatal traffic

accidents were men, primarily those between 25 and 34 and 45 and 54 years of age, while two traffic accident fatalities were caused by drunk adolescents aged between 15 and 17. The average level of intoxication among all persons responsible for fatal traffic accidents under the influence of alcohol was 1.36 per mille. The infamous “record holder” among them had 3.14 per mille in his blood. The calculation based on data from 2019 and 2020 reveals that every twelfth traffic accident and every third fatal traffic accident is caused by intoxicated traffic participants.

This year, the Slovenian Traffic Safety Agency has once again collaborated with the Police and non-governmental organisations in putting together the national preventive campaign and several activities for preventing driving under the influence of alcohol, drugs, and other psychoactive substances. As 2021 is drawing to a close, the Slovenian Traffic Safety Agency wishes all traffic participants a safe journey and that you arrive at your every destination without mishap.
